- Bolumena konstante mantenduz, berotu egiten da bukaerako presioa lortu arte, gero hoztu egiten da, presioa konstante mantenduz, bukaerako egoera lortu arte.
- Prozesu isobaro baten bidez, gasa hoztu egiten da bukaerako tenperatura lortu arte, gero isotermikoki bukaerako egoera lortu arte konprimatu egiten da.

Suposatu prozesu guztiak itzulgarriak direla.

$$w = \int -P \cdot dV$$

Eta gasen ekuazio orokorretik:

$$P \cdot V = n \cdot R \cdot T$$
