

ADVICE FOR THE SELF-ASSESSMENT EXERCISES

The exercises of this section are designed so that students raise alternative solutions taking into account the explained procedures. In some cases, the graphical solution is shown, and the analytical resolution is required which can be compared with the graphical solution. In other cases, the analytical resolution is given and the graphical solution is required. There are also some exercises in which no solution is given, and students have to solve them in both ways (analytically and graphically) comparing the solutions.
